

Abstract of the Disclosure

A schedule execution managing apparatus comprises a planned start time setting unit setting the planned start time of a schedule in correspondence with a predetermined base time and an offset from the base time, a planned start time storing unit storing the set planned start time, and a schedule execution controlling unit controlling the execution start of the schedule by referencing the contents stored in the planned start time storing unit. With this apparatus, a schedule change in an emergency is facilitated, and schedule information can be easily reused in a different environment.
